We Are Moving!

In the fall of 2022, Aquatek Water Conditioning will move to a new location at 7300 State Route 108, just north of Airport Highway/US-20A in Wauseon. This is an exciting time for us as over the past several years we have outgrown our current space. We will have enhanced parking and offices, which will allow us to continue to provide the excellent service that our customers have come to expect from us. We are excited about this opportunity and can't wait for you to visit us there! Once we are settled in, we are planning to have an open house and ribbon-cutting ceremony. Stay tuned for more information in the near future!

Brandon Schindler
Owner

Our Soon-To-Be New Location

7300 State Route
108, Wauseon
Formerly George's Radio
& Antenna Service and
Carpet Mart

While we are excited to move, we're not there yet! Please continue to visit us at the 121 E. Chestnut St. location.

Helping you #TakeControlOfYourWater Since 1952

Important!

Attention Portable Exchange Tank Customers:

A letter was sent in January to all Portable Exchange (PE) tank customers announcing the discontinuation of the tank service after October 2022. Please contact us as soon as possible to go over your options. Thank you.

Pond Products in Stock!

Have you ever wondered why we are so passionate about helping our customers maintain their pond? Because many of our customers use their pond for drinking water!

"Although it is not a requirement for a pond water treatment system, maintaining the health of a pond is suggested. Managing algae growth and weeds will help in the quality of water and overall health of the pond. When using a pond as a water source, there are FDA approved products that are safe for drinking water systems. Used properly, the products will aid in keeping the water clear and minimize suspended solids, resulting in a clean, great looking and healthy pond." - from Brandon Schindler's article published in *Water Quality Products Magazine*

We had a few technical difficulties with our Pond Maintenance Seminar in May this year. We have rescheduled with Sanco Industries & will record it again for better quality. Watch our social media pages & website to find out when it is ready to view!

After a Power Outage...

It's that time of year when a power outage is more likely to occur. If your filter valve is a digital panel, here is what you need to know.

- To stop the screen from flashing, locate the screw to the right of the panel and unscrew to open cover
- Simply tap one of the buttons and you're good to go! The valve will keep its memory for a minimum of 48 hours – all master programming is held
- Note: the unit still works even though the screen is flashing
- Visit aquatekwater.net FAQ section for more information!

IT'S POND SEASON!

OUT WITH THE OLD & IN WITH THE NEW...FILTER

Summer is the best time to change the floating pond filter if you have a pond water treatment system.

We recommend doing this once a year for most residential homes. This preventative maintenance can help avoid a collapsed filter that causes your pump to lose prime and ultimately no-water.

We have plenty of filters in stock for our DIYer's. If you would like our team to change your filter, give us a call to see if you can be added to the existing route.

Pro Tip: This is a great time to change the inline filter in your home as well.
